Unique font to make monograms and
other bits of text in a unusual maze style

1. Install the font like any other and restart
the application you want to use it in.

2. Type your monogram or other text. The big letters above are in the uppercase positions;
the small ones are in the lowercase positions. There are also brackets and spacers. Here are
some samples to get you started.

3. To get a monogram like this you type **[ABC]**

4. If you want it spread out a bit more like this you type **[A-B-C]**

5. If you want to include small letters like this you type **{aBc}**

6. Or for this you type **(aBc)**

7. There are large and small ampersands you type **[A-&-B]** or **[C+D]**

8. The small letters are spaced to be used singly with the big letters. But if you want to use

them together like this you type **{a/b/c}** so they connect, or adjust your tracking

or spacing to taste.
